

Campus Pulse

Oscar Mandell, Lindsay Der, Paula Iglasias, Priyanka Durai, Victoria Hamman,
Eshaan Gill, Faith Carrillo

Objective:

Quantify and explain student sentiment around key campus topics through social media and neuro-linguistic programming (NLP)

Tech Stack

- **Python:** ML library
- **Matplotlib:** Simple library to visualize data
- **Seaborn:** Visualizes data into creative, informative graphs
- **Scikit-learn:** Premier open source machine learning library for python

Methodology:

- Explored sentiment by analyzing different topics around campus and their “sentiment score”
- Created a taxonomy of the most popular topics on college campuses
- Visualized the most popular topics through heatmaps using Matplotlib

Results:

- Across multiple campuses, safety had the worst net sentiment across the three prominent schools we tested
- Transportation and financial aid came next, with both often having very negative sentiment.
- Social life and dining often had very high sentiment scores, with people at all campuses we testing being seemingly happy with these parts of their school.
